

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

Although the list includes no species whose occurrence in Tennessee is improbable, it is to be regretted that Mr. Rhoads should not have been content to record not only the "10 of doubtful record," but a few others also, as species of probable occurrence, without including them and numbering them as a part of his list. He could have given the evidence in such cases 'for what it may be worth,' and thus have saved giving to his list, to say the least, a very unscientific flavoring. So many such inclusions render it very far from a 'hard-and-fast' list. In fact we are surprised to see a writer of Mr. Rhoads's scientific ability and experience setting such a bad example in the matter of a local list.—J. A. A.

**Short's Birds of Western New York.**<sup>1</sup>—Mr. Short's former list (see Auk, XI, 1894, p. 168), published in 1893, contained 207 species, one of which is here omitted, and to which 23 are now added, giving a total of 229 species in the present edition. The annotations respecting the rarer species are brought down to date. The typographical execution has been greatly improved, the list being for the most part neatly arranged and printed; towards the close the compositor seems to have run short of type, supplying the deficiency, in certain letters, from a smaller font. The list has evidently been prepared with care, and may doubtless be regarded as a trustworthy enumeration of the birds of the region to which it relates.—J. A. A.

**A List of Nebraska Birds.**<sup>2</sup>—This paper is primarily designed to give the residents of Nebraska some knowledge of the distribution, comparative numbers, and economic value of the birds which occur in their State. An opening chapter, 'Remarks about Birds in general,' treats of their relation to man and of their economic and esthetic importance. The list proper includes brief annotations on distribution and manner of occurrence, with, in some cases, remarks on the bird's food and its value to the agriculturist. Herein are recorded 415 species and subspecies. Of these *Xema sabinii*, *Sterna paradisæa*, *Tantalus loculator*, *Ammodramus caudacutus nelsoni*, *Sitta pusilla* and *Merula migratoria propinqua*, seem to have been introduced on insufficient evidence, while *Quiscalus quiscula*, *Acanthis linaria rostrata*, *Junco hyemalis oregonus*, *Lanius ludovicianus*, *Seiurus noveboracensis* are included as a result of evident misidentifications. Subtracting these eleven birds and we have
